PREVENTION OF MOTHER TO CHILD TRANSMISSION

Baby PCR tested positive around 6 weeks rate

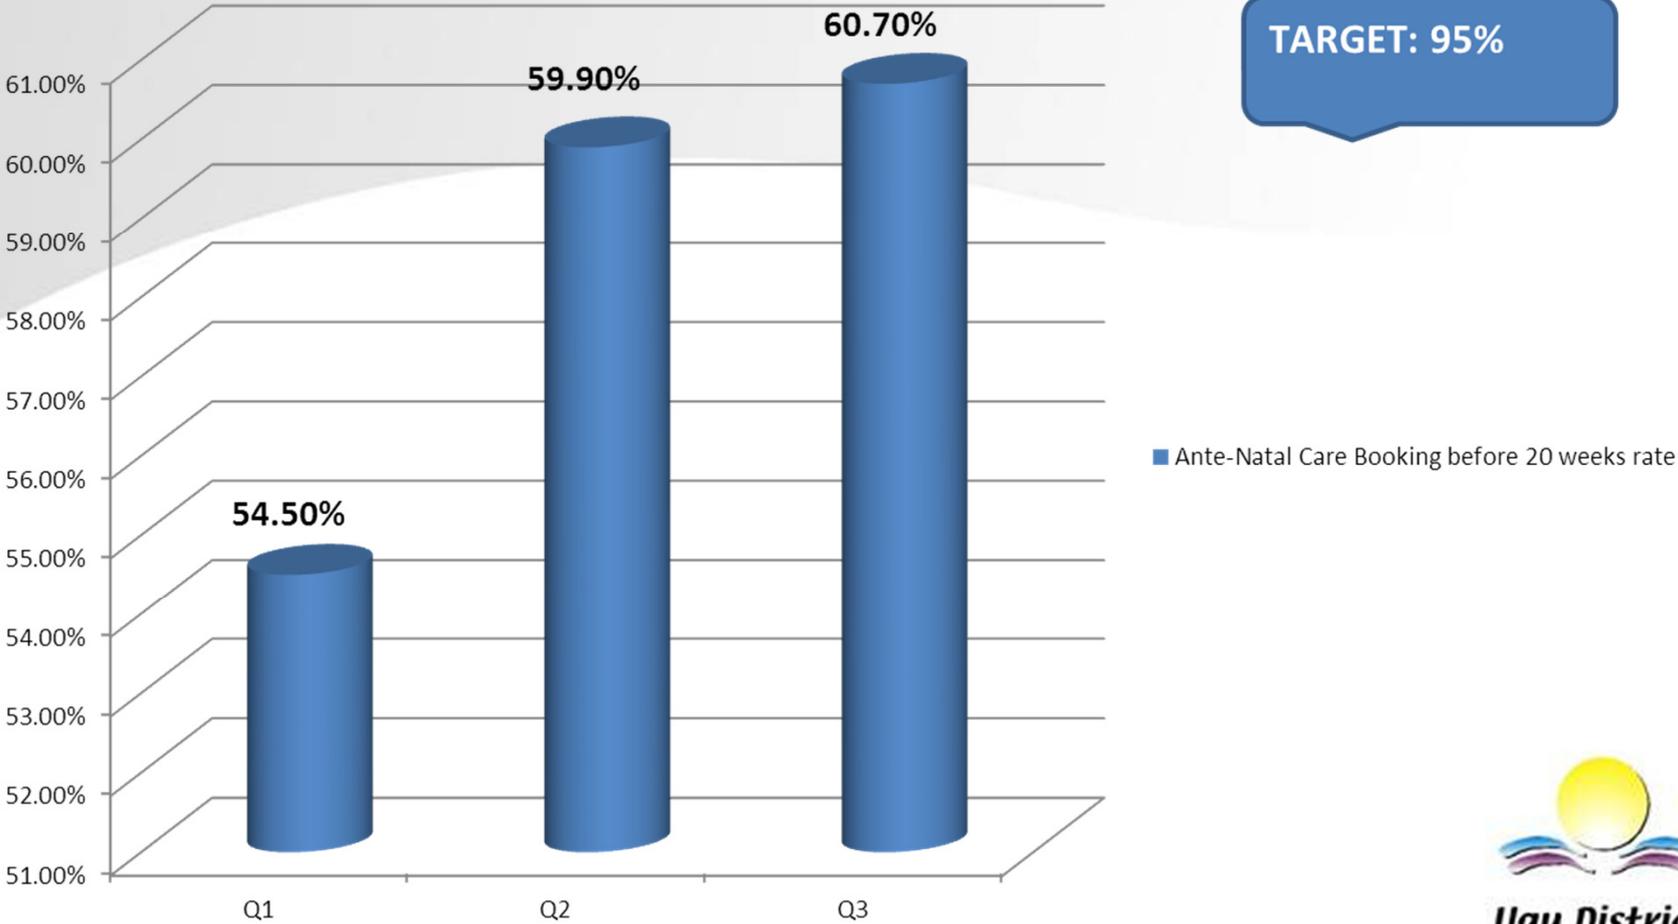

Baby HIV antibody test positive at 18 months rate

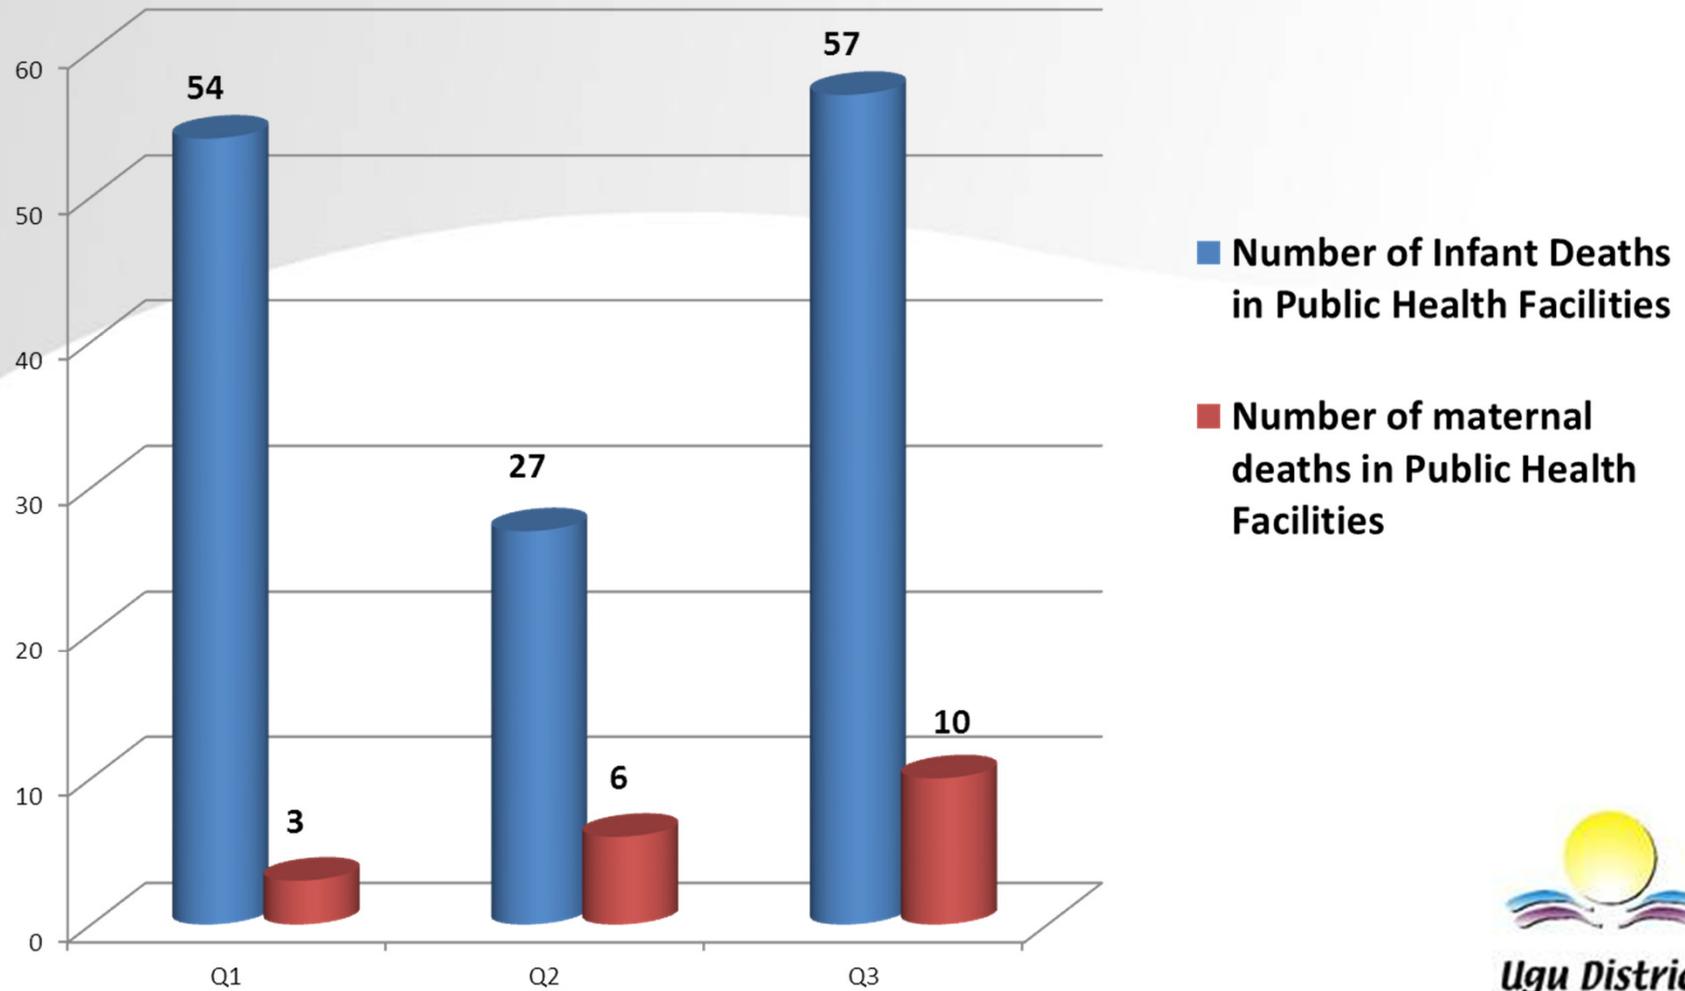

PREVENTION OF MOTHER TO CHILD TRANSMISSION

Ante-Natal Care Booking before 20 weeks rate

PREVENTION OF MOTHER TO CHILD TRANSMISSION

PREVENTION OF MOTHER TO CHILD TRANSMISSION

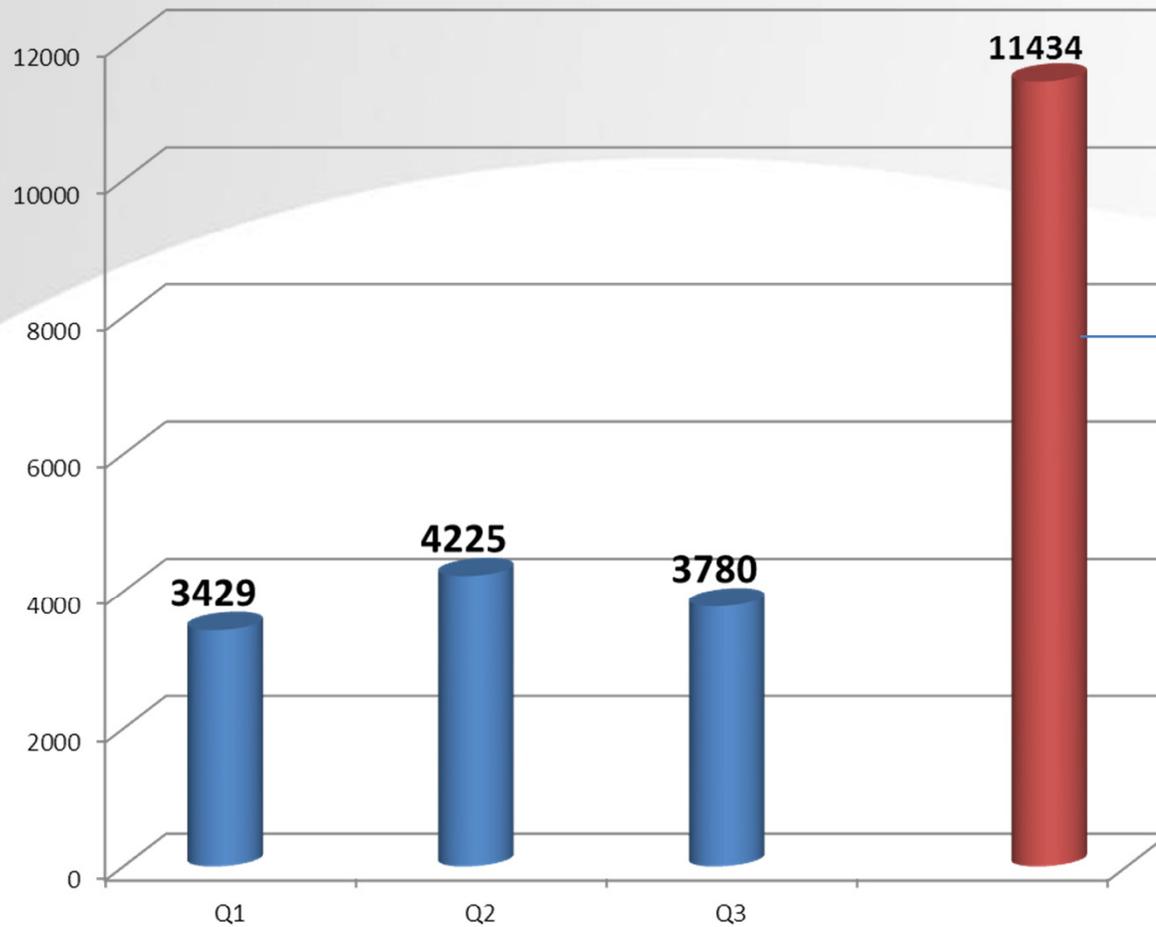

- Favourable trends noted in early booking, testing of infants and number of infants who tested positive. Mixed feeding remains a challenge.
- Facilities are dedicated to promoting safe infant feeding via the mother and baby friendly hospitals initiative.
- St Andrews has been assessed and accredited with mother and baby friendly status.
- District Clinical Specialist Team to discuss mortality targets with facilities as well as narratives for deviations set by National Department of Health. To continue with auditing for all paediatric deaths.

PREVENTION OF MOTHER TO CHILD TRANSMISSION

- **10 maternal deaths: 6 died at regional hospital due to 1x retained placenta, 1x ARV side effects, 1x Meningitis, 1x incomplete abortion, 1x Burns, 1x ectopic. District hospitals x 4: 1x ruptured uterus, 1x meningitis, 1x high spinal anaesthesia , 1x TB. Reasons for mortality is lack of skilled personnel to diagnose & manage obstetric emergencies.**
- **All deaths audited & modifiable factors followed up in PHC & hospitals & implemented in- service training at hospitals, CHCs & hospitals & clinics. Essential Skills in Management of Obstetrical Emergencies weekly drills done at all hospitals supported by District Clinical Specialist Team. National planned two months mop up training of ESMOE to all doctors & nurses working in maternity units.**
